TITLE : SEALING PIECE AND SLIDE

ABSTRACT : PURPOSE: To facilitate the placing of a cover glass and to prevent an objective from abutting on a frame body at the time of microscopic inspection by making the sealing piece translucent and enabling the sealing piece to be attached/ detached to from a transparent slide.

CONSTITUTION: The sealing piece 1 is made translucent so as to scatter light irradiating a part where a sample 7 to be inspected is placed and made attachable/detachable to/from the surface of the transparent slide 2. A recessed part 5 and a projection part 6 fitted to the top surface of the seal piece 1 that a filter 3 fitted to the frame body 4 abuts on are formed preferably on the top surface of the sealing piece 1. Further, the slide is made translucent at the part where the sample 7 to be inspected microscopically is placed and the recessed and projection parts 5 and 6 where the filter 3 fitted to the frame body 4 abuts on are formed on the top surface. Consequently, the translucent slide can be manufactured and the need for troublesome operation is eliminated.
